## Window Communication System

ClearTouch utilises Sound Leisure's screen seal technology to allow any touch screen interface to be safely housed behind a sheet of glass such as a window pane, while remaining usable to the customer on the outside. Using a bookshelf sized PC the complete system is neatly housed in a wood, metal or plastic surround and can be hung from the ceiling or placed on a pedestal when being positioned in the window.

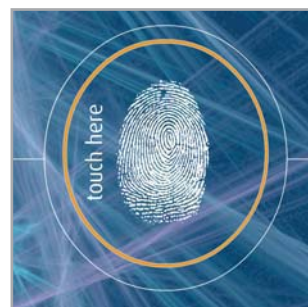

This system allows 24 hour access to store kiosks providing information and promotional material, without the problems associated with siting expensive hardware outside.

Unlike traditional touch screens which require actual contact with the screen surface itself, ClearTouch technology means there's absolutely no contact with the actual touch screen resulting in less wear and tear or potential damage and therefore, greater returns on your investment.

When combined with Sound Leisure's ClearSound Transducer this offers a complete audio/video interactive package to customers outside your store 24/7.

### FEATURES:

- TFT LCD Panel : Samsung / LG / Phillips ●
- Screen Sizes Available Include: 15", 19" ●
- Wide Viewing Angle ●
- High Contrast Option ●
- Average Brightness 300 cd/m2 ●
