microPRO Duo

Full range, Double Sided Loudspeaker

The MicroPro Duo offers a clear, full range sound from a surprisingly small unit. By utilizing the thin dimensions of our popular MicroPro speakers, SLR have created a double-sided "back to back" unit around the size and shape of the average A4 book. When affixed to the wall through the "spine"* the Duo excels at producing clear, equal sound from both sides of the enclosure thus covering a large area with fantastic, non-directional sound. The Duo's amazing ability to emit clear reproductions of any program above 200Hz, combined with its unique double sided design allow the dispersion of sound to be much greater than that of a standard speaker enclosure. This makes it ideal for public address systems or background music. Housed in a smart, metallic casing that is designed to fit subtly into any environment the Duo offers fantastic sound for use in a multitude of environments.

The MicroPro Duo is well suited for racecourses, football grounds, corporate buildings, churches, railway stations, airports, hotels, restaurants, museums, conference centres or Shopping centres.

* Universal ball and swivel wall mount bracket not included.

* The Duo can be weatherproofed for outdoor use.

specifications
