MiniPROMOTER

Based on SLRetail's popular MiniPro flat panel speaker system, the MiniPROMOTER offers even more unique features to engage potential customers. For example the frame around the flat speaker panel opens on a hinge to allow additional graphics to be neatly slipped in place, even the panel itself is a whiteboard allowing for easy written messages to be applied in seconds! The audio for your promotion is played from an integral USB memory stick audio unit allowing mp3 files to be simply written to the key from a PC. This can be triggered by a built in microwave sensor offering greater attraction as the message can be played to a potential customer who is in the vicinity.

There are many advantages of Flat Panel Loudspeakers over conventional designs, their flat configuration allows sound to be dispersed from the entire surface of the panel as opposed to just the centre. This translates into omni-directional performance characteristics which spread out evenly across the entire listening environment and not just directly underneath the loudspeaker source.

The MiniPromoter, weighing less than 4 kilograms, can deliver an astonishing 114dB peak output, whilst handling 80 watts (AES). A generous operating range of 60 Hz right up to 21KHz makes this unit suitable for almost any type of program.

DIMENSIONS
660mm (H) x 540mm (W) x 70mm (D)
Weight 3.6Kg

MicroPROMOTER

The MicroPROMOTER offers no less of the impact or features you find on its big brother. Integrated MP3 USB player, release frame to allow user printed graphics to be applied and an integrated amplifier and volume control. An additional motion sensor allows potential customers to trigger the audio.

Over several years, Flat Panel Loudspeaker Technology has advanced to the point where newly developed compact, second generation, high power transducers can produce significant sound pressure levels with a full-spectrum frequency response.

At 20 watts and the size of an A4 sheet of paper the MicroPROMOTER, when compared with piston drive units, delivers an exceptionally even level of coverage within a room or venue.

DIMENSIONS
333 x 233 x 40 mm
Weight 1.4Kg

MicroPROMOTER - in A4 format
Smaller in size than MiniPROMoter, still full
embedded Audio Signage Player with sensor
triggered operation

Mini PROMOTER FLAT PANEL AUDIO SYSTEM

- DELIVERS CRISP CLEAR SOUND
- HINGED PICTURE FRAME SURROUND TO CHANGE PICTURE/POSTER
- WHITE BOARD PANEL SURFACE
- MICROWAVE MOTION SENOR TO TRIGGER AUDIO
- USB MEMORY STICK DELIVERS MP3 AUDIO
- INTEGRAL AMP AND VOLUME CONTROL
- CAN BE POWERED BY A BATTERY PACK
